

AJINKYA SWAMI

QA Engineer

Gurugram, Haryana • +91 8875043720 • ajinkyaswami1999@gmail.com

PROFESSIONAL SUMMARY

Dynamic and results-driven QA Engineer with 4+ years of hands-on quality control and testing experience ensuring robust product reliability and customer satisfaction. Proven track record of architecting comprehensive quality control frameworks across 8–9 complex projects, identifying defects, and optimizing performance metrics. Possesses strong technical competence in Python automation and manual methodologies, combining sharp analytical skills with AI-assisted product development and search visibility frameworks to mitigate potential issues before deployment.

TECHNICAL SKILLS

Programming Languages: Python

API & Performance Testing: Postman, API Testing, Load Testing

Databases & Logging: MySQL, Request-Response Log Analysis, Data Integrity Auditing

Methodologies & Tools: Manual Testing, Functional Testing, Regression Testing, SDLC, Agile/Scrum, Jira, Test Case Design & Execution

AI & Search Optimization: AI-Assisted Development, Search Engine Optimization (SEO), Answer Engine Optimization (AEO), Generative Engine Optimization (GEO), Google Search Console

PROFESSIONAL EXPERIENCE

PAYWORLD INDIA, Gurugram — QA Engineer

March 2022 – Present

UPI Application Testing

- Orchestrated end-to-end quality assurance cycles for the corporate UPI (Unified Payments Interface) mobile application across all primary functional components.
- Conducted comprehensive API testing and validation of 6+ core backend APIs to verify structural stability, security, and seamless workflow routing.
- Executed heavy load testing on application APIs under simulated high-traffic scenarios, sustaining a 95% success rate for targeted baseline response times.
- Implemented extensive front-end UI/UX testing covering 100% of user interface elements, accelerating fluid visual navigation and mitigating interaction bugs.
- Authored and executed a library of 150+ regression test cases, producing an 80% reduction in production-level product defects.
- Audited database accuracy and transaction persistence by analyzing request-response log streams, upholding a 99.5% operational data integrity rate.

EKYC Process Testing

- Directed end-to-end verification workflows for the core digital eKYC onboarding funnel, obtaining 100% test coverage against defined compliance requirements.
- Validated 95% of operational functional use cases and multi-path user scenarios to guarantee a secure, high-conversion identification workflow.
- Conducted device compatibility and integration testing over 90% of authorized hardware peripherals and biometric scanning devices.
- Monitored transmission logs to analyze 98% of data packet handshakes, ensuring bulletproof verification security and perfect database synchronization.

Dynamic Rate Plan Module

- Led complete quality control cycles for the dynamic pricing calculation engine, confirming 100% functional match against business-defined performance and reliability metrics.
- Collaborated actively within cross-functional Agile/Scrum sprints, supplying QA insights to engineering teams and accelerating rapid bug remediation.
- Compiled exhaustive QA validation artifacts, tracking structured master test plans, detailed matrix reports, and defect logs within Jira.

Cross-Functional Initiatives

- Contributed specialized QA testing frameworks for high-impact corporate systems, including Targets Creation, GST-Invoice Claim, and core Payment Gateway architectures across 100% of product rollouts.

PERSONAL PROJECTS

Voxelique (E-Commerce Platform for 3D Printed Products — voxelique.com)

AI-Assisted Full-Stack Developer & QA Lead

- Designed, deployed, and tested a dedicated web e-commerce storefront utilizing AI-assisted development tools to accelerate feature integration and asset management pipelines.
- Optimized the web application architecture for modern discovery engines using structured data schema, targeting advanced ranking metrics across SEO, Answer Engine Optimization (AEO), and Generative Engine Optimization (GEO).
- Monitored search appearance, indexing errors, and query mapping using Google Search Console, resolving functional performance issues to guarantee high visibility and zero-click answer authority.

Toolique (Multi-Purpose Web Utilities Platform — toolique.in)

AI-Assisted Full-Stack Developer & QA Engineer

- Conceptualized, developed, and deployed an active online utilities platform providing an array of real-time web micro-services via AI-driven prompt engineering and code generation frameworks.
- Implemented progressive search optimization structures configured specifically for search, LLM response context (AEO), and generative engine matching models (GEO).
- Leveraged Google Search Console analytics to execute comprehensive structural testing, track indexing velocity, and configure high-performance rendering benchmarks to eliminate cross-device layout failures.

EDUCATION

MALAVIYA NATIONAL INSTITUTE OF TECHNOLOGY (MNIT), JAIPUR

August 2018 – June 2022

Bachelor of Technology (B.Tech) in Metallurgical and Materials Engineering
